No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           number of hits satisfying chosen parameters:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq length: 0 seq length: 2000000000

                                                                                                                                                                                                                                                                                                                                         Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         number of hits satisfying chosen parameters:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for reating cancer, infectious diseases and promoting beneficial autoimmune actions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases with a patient of a security or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases and promoting are useful for treating autoimmune diseases are the summaterial autoimmune diseases are the summateria

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
     The invention relates to a composition which includes a polypeptide or a multivalent polypeptide comprising one or more antibody-based antigen -binding domain of human composition with binding specificity for an antigen expressed on surface of a human cell, especially HLA-DR (human leukocyte antigen DR), where treating cells expressing HLA-DR with the multivalent polypeptide causes or leads to killing of cells without need of cycotoxic entities or immunological mechanisms. Also included are the nucleic acid and a host cell harbouring vector or nucleic acid. The polypeptide (optionally linked to cytotoxic or immunogenic agent), the nucleic acid and the host linked to cytotoxic or immunogenic agent), the nucleic acid and the host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sera were analysed for anti-peptide antibody activity by ELISA.
All three immunised rabbits produced anti-PGL1 antibody. Antisera
drawn from a rabbit on two different days reacted significantly with
the corresp. intact IGM-RF Glo.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      number of hits satisfying chosen parameters:

Light chain variable region of anti-CTLA-4 antibody 10D1.

29-MAY-2001 AAB67508;

(first entry)

Complementarity determining region; CDR; immune response; antibody; cytotoxic T lymphocyte associated antigen-4; CTLA-4; B7 ligand; cancer autoimmune disease; infectious disease; inflammation; allergy; rheumatoid arthritis; myasthenia gravis; lupus erythematosus; multiple sclerosis; insulin-dependent diabetes mellitus; inflammation; transplant rejection; graft versus host disease. ligand; cancer;

Homo sapiens.

Minimum DB seq l Maximum DB seq l	Minimum DB seq length: 0 Maximum DB seq length: 2000000000	
Post-processing:	Post-processing: Minimum Match 0%	

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
